

But where is it? (Trixie 26.2.0)

All emulators and bios are located in the following folder:

- /home/ps4linux/ES-DE/EMULATEURS/
- /home/ps4linux/ES-DE/bios/ (This BIOS path is also used for all emulators.)

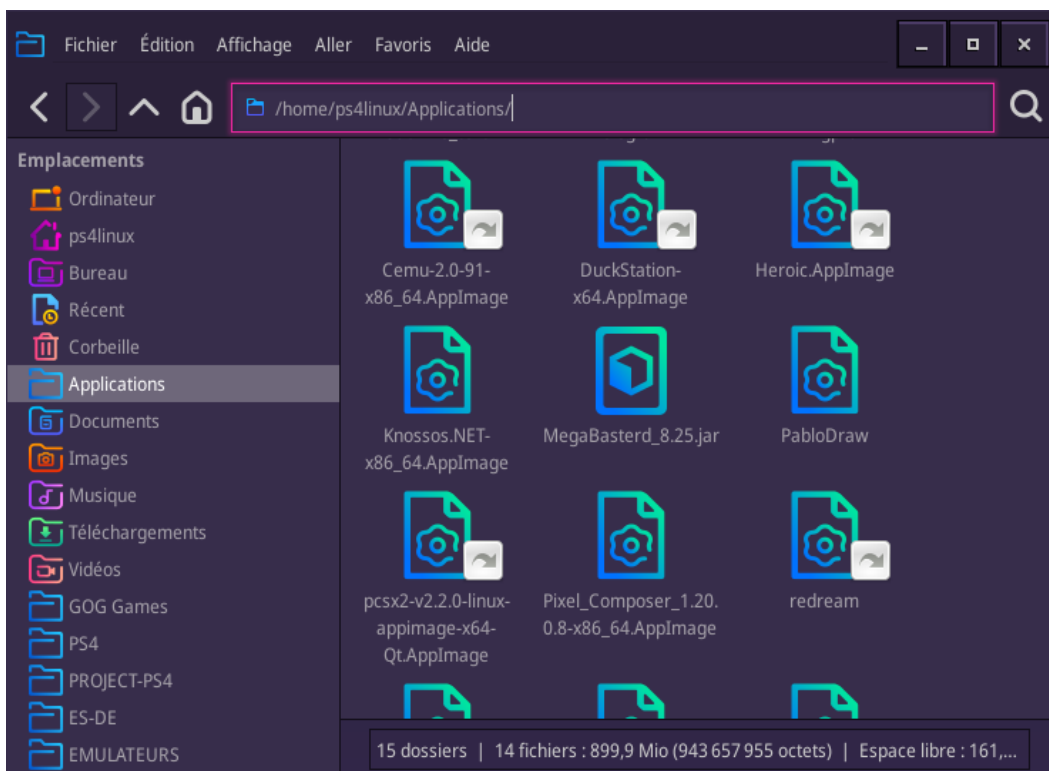

All emulators have a shortcut located in:

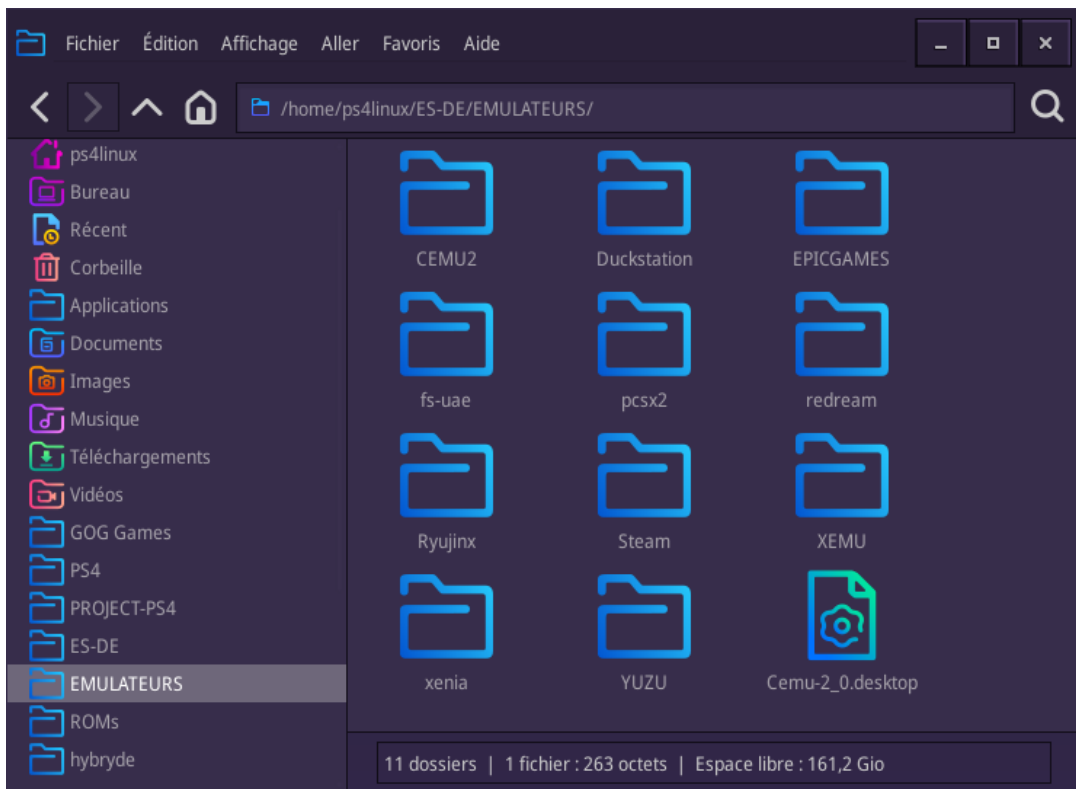

- /home/ps4linux/Applications/

To be recognized as an application, an appimage must absolutely be placed in this folder. This is the rule for all Linux systems.

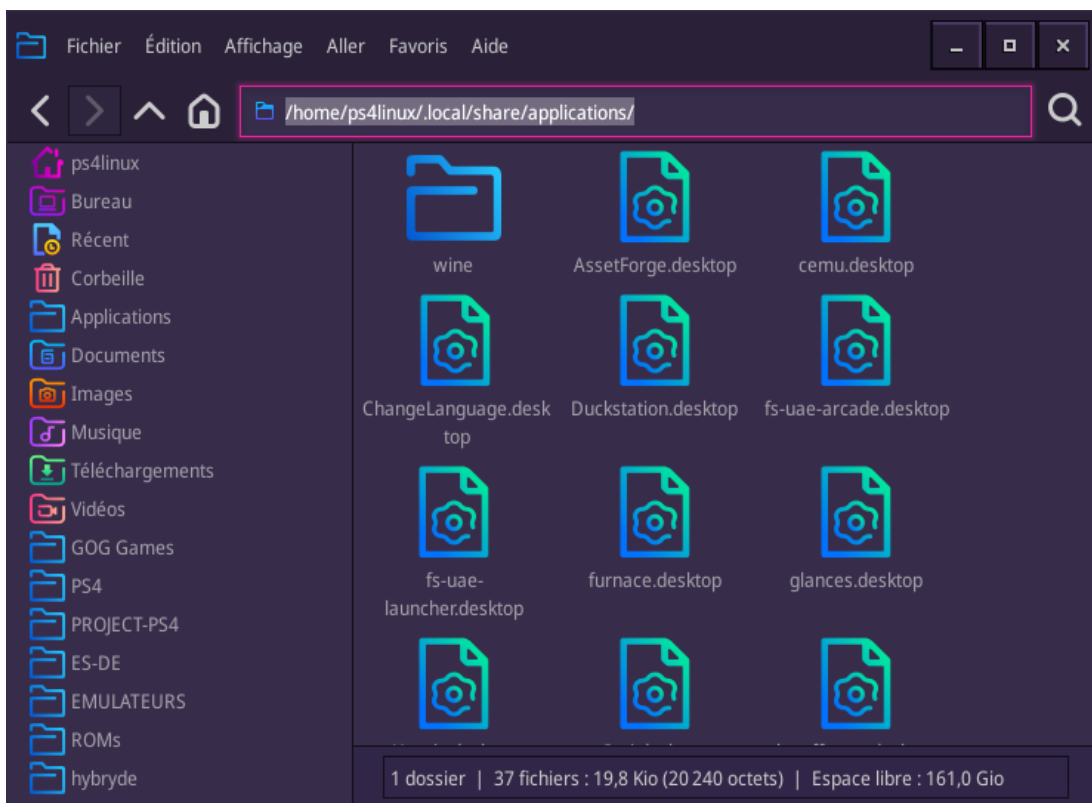

In the /home/ps4linux/Applications/ folder, you will also find the portable APPZ.

Stick with this method; it allows you to have a clean system. It's not available everywhere.

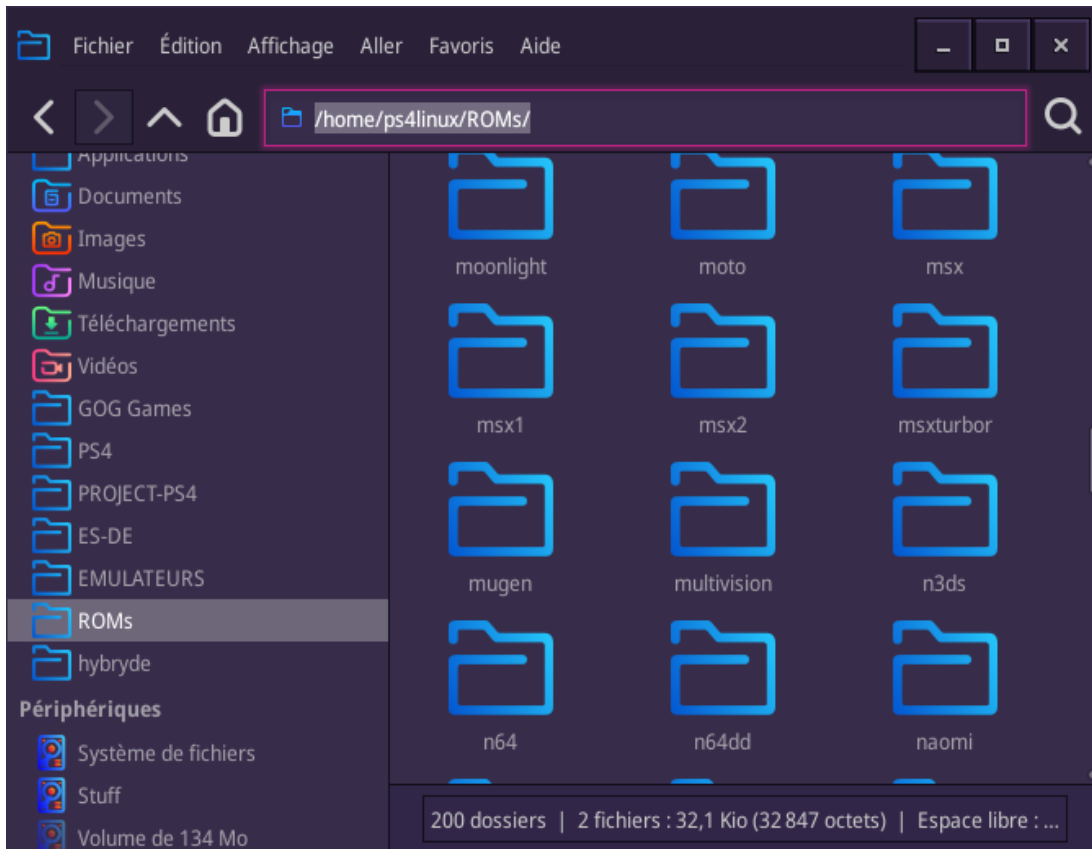

The .desktop files for applications are located in:
- /home/ps4linux/.local/share/applications/

To add ROMs to ES-DE and your emulators:
- /home/ps4linux/ROMs/

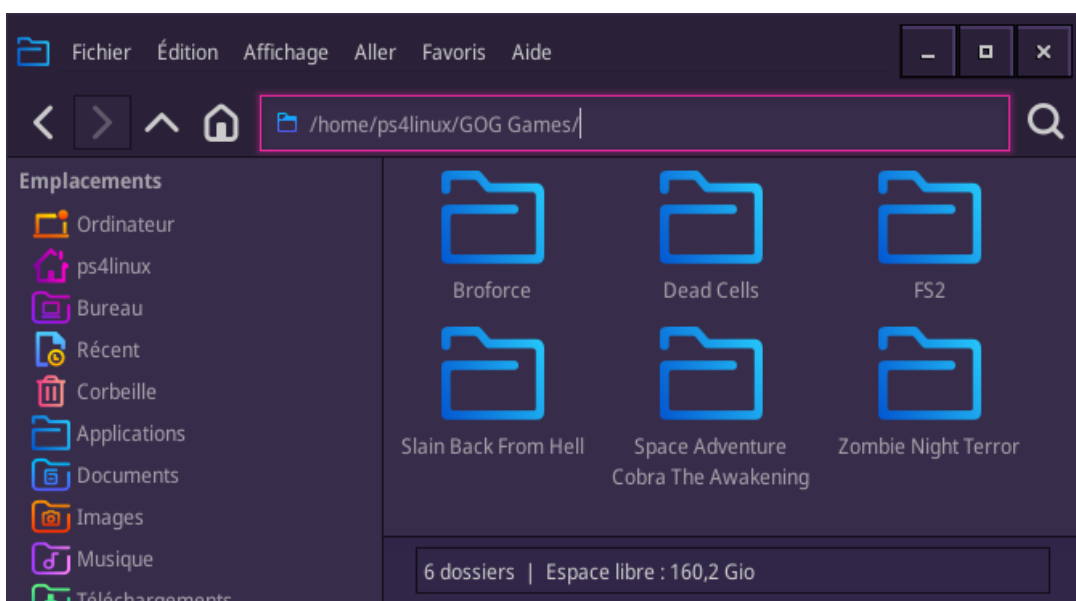

You have a .txt file explaining what ES-DE supports: iso, cue, zip... ES-DE automatically rescans ROMS folders.

All Linux games are in the folder:

- /home/ps4linux/GOG Games/

These are all portable games, pre-configured with a unique portable Wine version for each game. If you no longer want these games, simply delete the game folder.

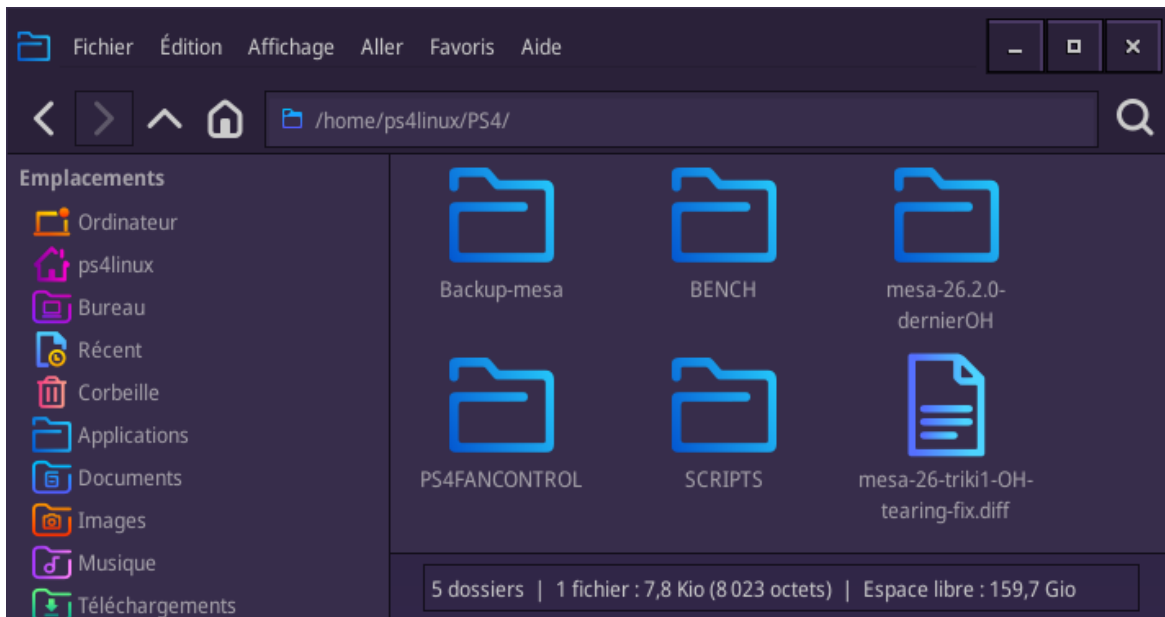

In the folder:

- /home/ps4linux/PS4/

I recommend putting your Mesa backups there.

You'll also find the benchmark software and the distribution's scripts there. **Don't delete anything!**

APPZ INCLUDE :

Graphique :

Asprite

Assetforce

IcyDraw

Pixelcomposer

Pixeldraw

PixelOver

Pixelpart

Developpement :

WingPro

Sublime Text

Internet :

MegaBastered with proxy

Multimedia :

Furnace

Reaper

System :

Magic partition recovery

Magis partition uneraser
